npm nodemon index.js

MVC → Model View Controller - [pattern]

# React

- 1) Component Architecture
  - 2) State & Props
  - 3) useState & useEffect
  - 4) useMemo, useSelector, useRef, useCallback
  - 5) Context API & useContext (prop drilling)
  - 6) Redux
- 

---

## 1) Javascript fundamentals

- variables (let, const, var)
- Execution context
- hoisting
- comparison operators (==, ===)
- Arrays
- objects
- functions.

## 2) OOPS.

- 1) this keyword
- 2) Constructors & Classes
- 3) Prototype & Prototypical Inheritance
- 4) call, apply, bind & their Polymorphism

### 3) Functional Programming

- 1) Pure functions
- 2) Higher order functions (map, filter, reduce)
- 3) Polyfills of HOF (map, filter, reduce)

### 4) Asynchronous Programming

- 1) callbacks & how they work Asynchronously
- 2) Promises
- 3) Async Await
- 4) Promise combinators (.all, .allSettled, .race, .any)
- 5) Polyfills 

`(Promise.all)`

}   
 Promise.any   
 Promise.race
